## **CARING FOR YOUR IRISES:**

- \*Iris plants can grow in any soil with Good Drainage.
- \*Water should never stand around the base of the plants as this causes rot.
- \*In areas with poor drainage, simply build up flower beds slightly.
- \*Should you have a clay soil, just add sand.
- \*Add compost and bone meal to soil before planting.
- \*Plant the iris so the top of the rhizome is exposed to the sun and the roots are well spread out under the soil.
- \*Plant 15-20cm apart
- \*Water well for the first 3 weeks- until plant is established.
- \*Fertilize 3.1.5 in the Spring and 2.3.2 in the Autumn.
  
- \*Every 3 to 4 years split your Irises to ensure the plants keep flowering.

- 1-EASY TO GROW
- 2-DROUGHT TOLERANT
- 3-SUNNY POSITONS
- 4-EASY PROPAGATION
