CARING FOR YOUR IRISES:

- *Iris plants can grow in any soil with Good Drainage.
- *Water should never stand around the base of the plants as this causes rot.
- *In areas with poor drainage, simply build up flower beds slightly.
- *Should you have a clay soil, just add sand.
- *Add compost and bone meal to soil before planting.
- *Plant the iris so the top of the rhizome is exposed to the sun and the roots are well spread out under the soil.
- *Plant 15-20cm apart
- *Water well for the first 3 weeks- until plant is established.
- *Fertilize 3.1.5 in the Spring and 2.3.2 in the Autumn.

- *Every 3 to 4 years split your Irises to ensure the plants keep flowering.

1-EASY TO GROW
2-DROUGHT TOLERANT
3-SUNNY POSITONS
4-EASY PROPAGATION
